1 : Setup

1.1: QUICK SETUP

- Create Empty Scene
- Delete the Main Camera on the scene
- Create a Plane and set position to (0,0,0).
- Drag and drop Essentials prefab into the scene.
- Click Play.

1.2 : QUICK ITEM SPAWNER SETUP

- Create an empty gameobject and call it “World”.
- Set the “World” position to (0,0,0). This will hold prefabs for organization.
- Drag “ItemSpawner” prefab into scene
- Set it as a child to “World”.
- Place it in front of the Player.
- Click Play.

1.3 : QUICK STACK REMOVER SETUP

- Drag “ItemSpawner” prefab into scene
- Place it behind the Player.
- Set it as a child to “World”.
- Click Play.

1.4 : QUICK DUSTBIN SETUP

- Drag “Dustbin” prefab into scene
- Place it on available space.
- Set it as a child to “World”.
- Click Play.

1.5 : QUICK DOOR SETUP

- Drag “Door” prefab into scene
- Place it on available space.
- Click Play.

1.6 : QUICK HANDCART SETUP

- Create an empty gameobject and call it “HandCartWorld”.
- Set “World” position to (0,0,0). This will hold prefabs for organization.
- Attach “HandCartArea.cs” script to this gameobject.
- Create a Plane and place it on available space
- Set it as a child to “HandCartWorld”.
- Click Play.

1.2 : QUICK CRATE SPAWNER SETUP

- Drag “CrateSpawner” prefab into scene
- Set it as a child to “HandCartWorld”.
- Place it on available space.
- Click Play.

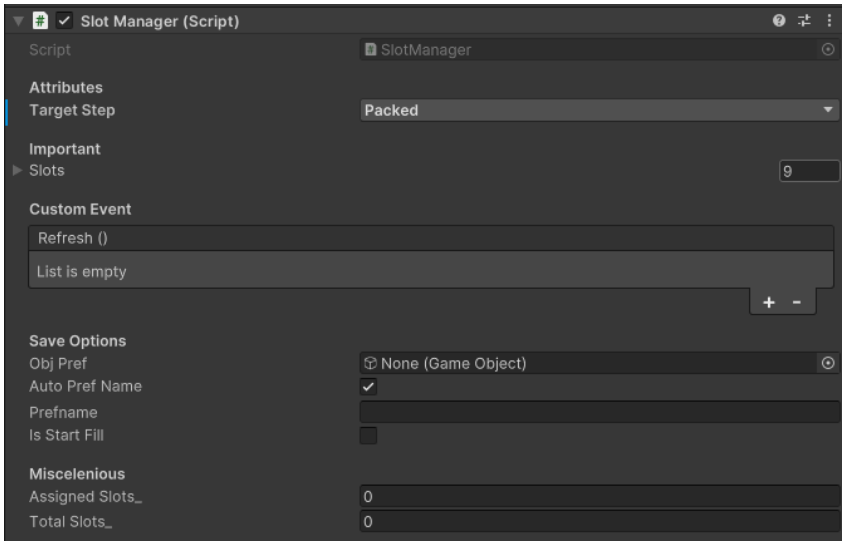

2 : Input Overview

The input control is controlled by “_GameManager.cs” script.

```
void InputMan()
{
    ThePlayer.SetInput(Input.GetAxis("Horizontal"), Input.GetAxis("Vertical"));
}
```

3 : Slot Manager Overview

The script holds slots on which items can be placed into.It is assigned to “ItemSpawner” prefab.

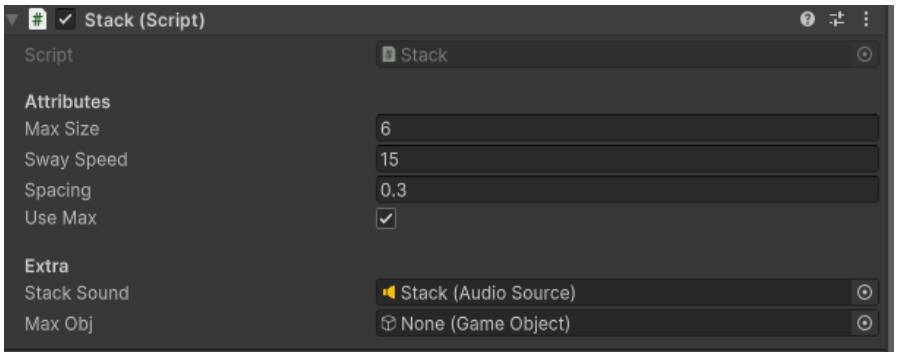

Saving items to player prefs

You can save items by following these steps:

- Give a unique name to “Prefname” Property.
- Assign your desired prefab to “Obj pref” property.
- Save Scene.

3 : Stack Holder Overview

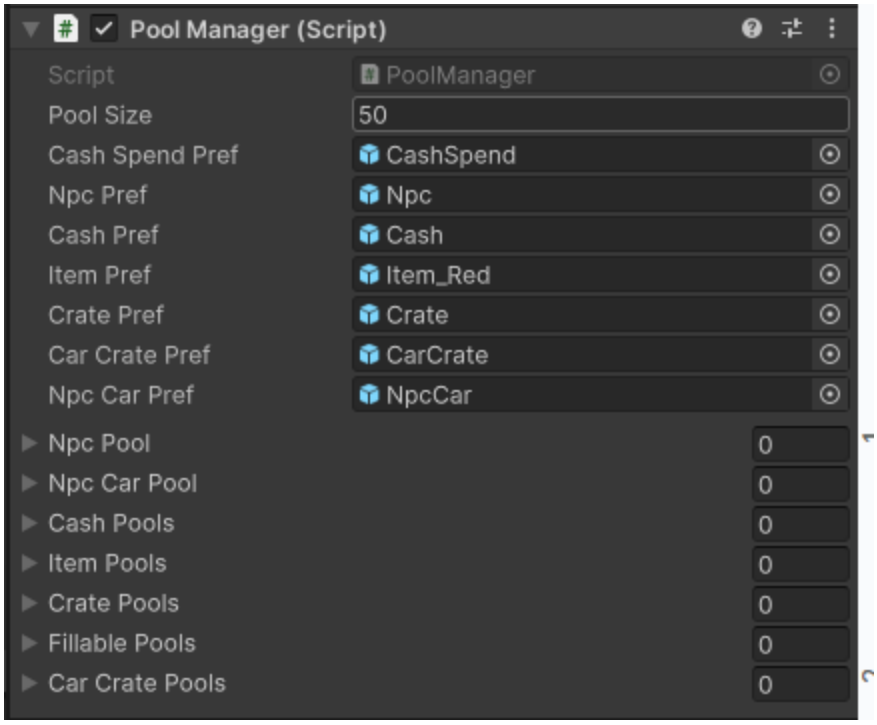

Items are stacked using “Stack.cs” script.This is attached to “Stack” and “HandCart” gameobject in Player prefab.

You can control max size ,spacing and sway speed using this script.

3 : Pool Manager Overview

The script holds pooled objects to optimize performance.

Note: When you change your Item Spawner “Item Pref”,change also “Item Pref” in PoolManager.cs to to match your desired item to ensure correct item pooling.

4 : Hand Cart Overview

You can deactivate handcart by Deactivating the “HandCart” gameobject on the Player prefab.

5 : Economy Overview

Game Economy is controlled by the “EconomyMan.cs” script.
